

## Introduction

Our company was established to perform **professional** road transport services by combining decades of personal experience. Our colleagues are **experts** carrying out excellent **team work**. This is the key to the prosperous professional activity marked by **quality, personalized service and flexibility**.

Our aim is the **continuous progress**, which assures that we can provide **correct, cost-effective, efficient and accurate services for our partners** with the best and most up-to-date means in the field of transport and carriage and in the course of our expanding complementary services.

By diversifying the profile of our company we consider it important to use our professional experiences in wide spectrum of transport. Thus, we endeavor to **cooperate with our partners in the long term**, to perform the tasks pursued accurately. Therefore, we seek **to be aware of and to understand the needs and expectations** of our current and future clients and to fulfill the undertakings **in a high-quality and reliable manner**.

With the help of our own motor pool and the contribution of sub-contractors our company can accomplish the various assignments. Our motor pool in multiple model ranges is eligible for the **optimal** planning of the transportation tasks by adapting flexibly to the requirements of our partners.

## History

Our company dates back to the political transformation in Hungary, when the change in the legal environment helped the freedom of property and encouraged the entrepreneurial sphere. Being member of economical working party we opened a **building material store**, where the field of transportation developed to be our major activity.

In 1994, together with our partner we established the company called **Szabó és Társa Ltd.** The main profile of the company was **earthwork in relation to civil engineering**, during the years we took part in the construction of underground parking at the Váci street of Budapest and in canalization work. We cooperated directly with the main contractor in the excavation works of **EXPO world exhibition** in 1996, where 30 lorries were under our direction.

After the dissolution of the company, instead of earthworks **road transport** became our main activity. Accordingly, we participated in transport of building materials and in cable-laying works of **Siemens**. Our transportation activity started with the charge of a multinational seed company, our cooperation dates back to 10 year thanks to the mutual satisfaction. Last year, beside the change of generation in the company we expanded our profile to **international transport** with the help of our partner. In the future our ambition is to profit by our two decades of transport experience in the interest of our clients and to provide them quality services.
